

EGIS

PRECISION FLAT CAGE GUIDANCE SYSTEMS

EGIS

Linear guidance systems with rolling elements

have established a position for themselves in the machine building industry as have roller bearings for rotary motion. They are essential wherever the requirement is smooth running combined with minimal construction and maintenance expenditure. Characteristics such as load carrying capacity, rigidity and precision also have an important role to play. Moreover, a wide range of tailor-made solutions are required which have to be adapted to each individual construction requirement.

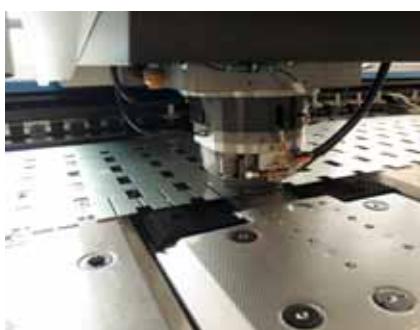

If a high level of precision, load carrying capacity and rigidity are required, as is generally the case with machine tools, precision linear guidance systems with needle or cylindrical roller flat cage assemblies without recirculating rolling elements offer an optimum solution. Compared with other linear systems, they require a smaller construction space, are used as locating or non-locating bearings depending on the configuration and are suitable for high accelerations. Due to the relative movement of the cage along the two raceways, they are particularly suitable for limited strokes. In contrast to linear guidance systems with recirculating rolling elements, the rolling elements are positioned between the raceways throughout the entire motion sequence. This guarantees exceptionally quiet running and a high level of running accuracy.

If specific space requirements are taken into account, the needle roller offers the longest bearing length together with the largest possible number of supporting rolling elements. The large number of linear contact points guarantees a significant load carrying capacity and rigidity. If the need for rigidity is not particularly important, the cylindrical roller provides a guidance system with greater elasticity. In this case, the high load carrying capacity which is characteristic of all these guidance systems is maintained.

Just as machine manufacturers automatically entrust specialised companies with the production of ball, roller or needle roller bearings, it is also advisable that they contact qualified specialists to produce linear guidance systems with rolling elements. EGIS, a medium-sized Swiss company, has been specialising for 50 years in the production of high-precision linear guidance systems which are essentially used in the following fields:

Machine tool construction
Printing machines
Measurement technology
Automation
Robotics
Optics
Productronics
Medical technology

In addition to a detailed technical section, this catalogue contains comprehensive information on the far-reaching EGIS programme for precision guideways in standard and made-to-measure lengths and the associated flat and angled flat cage assemblies as well as instructions relating to manufacturing possibilities for special parts to suit customers' requirements.

PRODUCT OVERVIEW

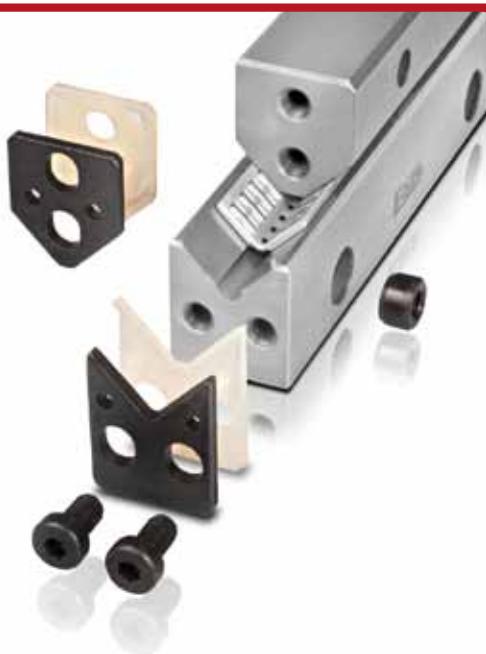

M AND V GUIDEWAYS

WITH NEEDLE OR CYLINDRICAL
ROLLER FLAT CAGE ASSEMBLY

M and V guideways are combined with angled flat cage assemblies and are particularly suitable for high load carrying capacities, rigidity, minimal friction and a high level of accuracy. They are used as linear locating bearings. They are manufactured in standard lengths up to a maximum of 1,000 mm which allows for rapid delivery.

In order to respond to specific customer requirements, the guideways in this range can also be supplied in made-to-measure lengths, i.e. in any required length up to the maximum length specified in the dimension table.

The guidance systems can be set to be free of clearance or can be preloaded to enhance rigidity using pressure screws.

ML GUIDEWAYS

WITH ADJUSTING GIB
FOR NEEDLE ROLLER FLAT CAGE ASSEMBLIES

This series combines an M guideway with an adjusting gib which distributes the preload equally over the entire length of the guidance system.

The pitch of the gib surface is 1.5%. ML guideways fulfil optimum requirements in terms of rigidity and precision.

MVZ (M/V/ML) GUIDEWAYS

WITH INTEGRATED TOOTHED RACK
FOR POSITIVE CONTROL OF THE NEEDLE
ROLLER FLAT CAGE ASSEMBLY

In this series, the angled flat cage assembly is subjected to positive control by an integrated toothed wheel / toothed rack unit. This guarantees perfect movement for the flat cage assembly even under difficult operating conditions.

**M AND ML GUIDEWAYS**

WITH SLIDING LAYER

The guideways in this series consist of an unhardened guideway with a layer fixed by adhesive. They are combined with V guideways and possess the same mounting dimensions as the M/ML and V guideways with flat cage assemblies. They are used in particular when an increased level of friction is required to provide damping or when static or pulsating loads are involved.

S AND J GUIDEWAYS

WITH NEEDLE ROLLER FLAT CAGE ASSEMBLY

These guideways are used in combination with needle roller flat cage assemblies as linear non-locating bearings. They are supplied in two versions, one of which possesses a flat structure and is therefore space-saving whilst the other has the same dimensions as the corresponding M and V guideways.

**LUE COUNTERSTAY SYSTEM**WITH NEEDLE ROLLER AND
CYLINDRICAL ROLLER FLAT CAGE ASSEMBLIES

These units consist of a locating guidance system, a non-locating guidance system and an L counterstay which preloads the two guidance systems. This arrangement prevents the system from becoming distorted by thermal expansion.

The LUE counterstay system provides the highest level of precision of all linear guidance systems with rolling elements.

FLAT CAGE ASSEMBLIES

Flat cage assemblies consist of a basic cage made from plastic or metal and a large number of precisely guided rolling elements. Needle rollers provide a minimal construction height and optimum load carrying capacity and rigidity whilst cylindrical rollers are less demanding with regard to the connecting structure and have a slightly less rigidity. Balls create the lowest level of friction of all rolling bearings.

Flat cage assemblies are designed for use with precision guideways but can also be used directly with customer-specific elements with appropriate raceways.

ACCESSORIES

END PIECES, WIPERS, INSERT NUTS

End pieces prevent the cage assembly from moving out of the loaded zone. Wipers protect the raceways against soiling under normal operating conditions.

Insert nuts allow for the transforming of a counterbore into a threaded hole.

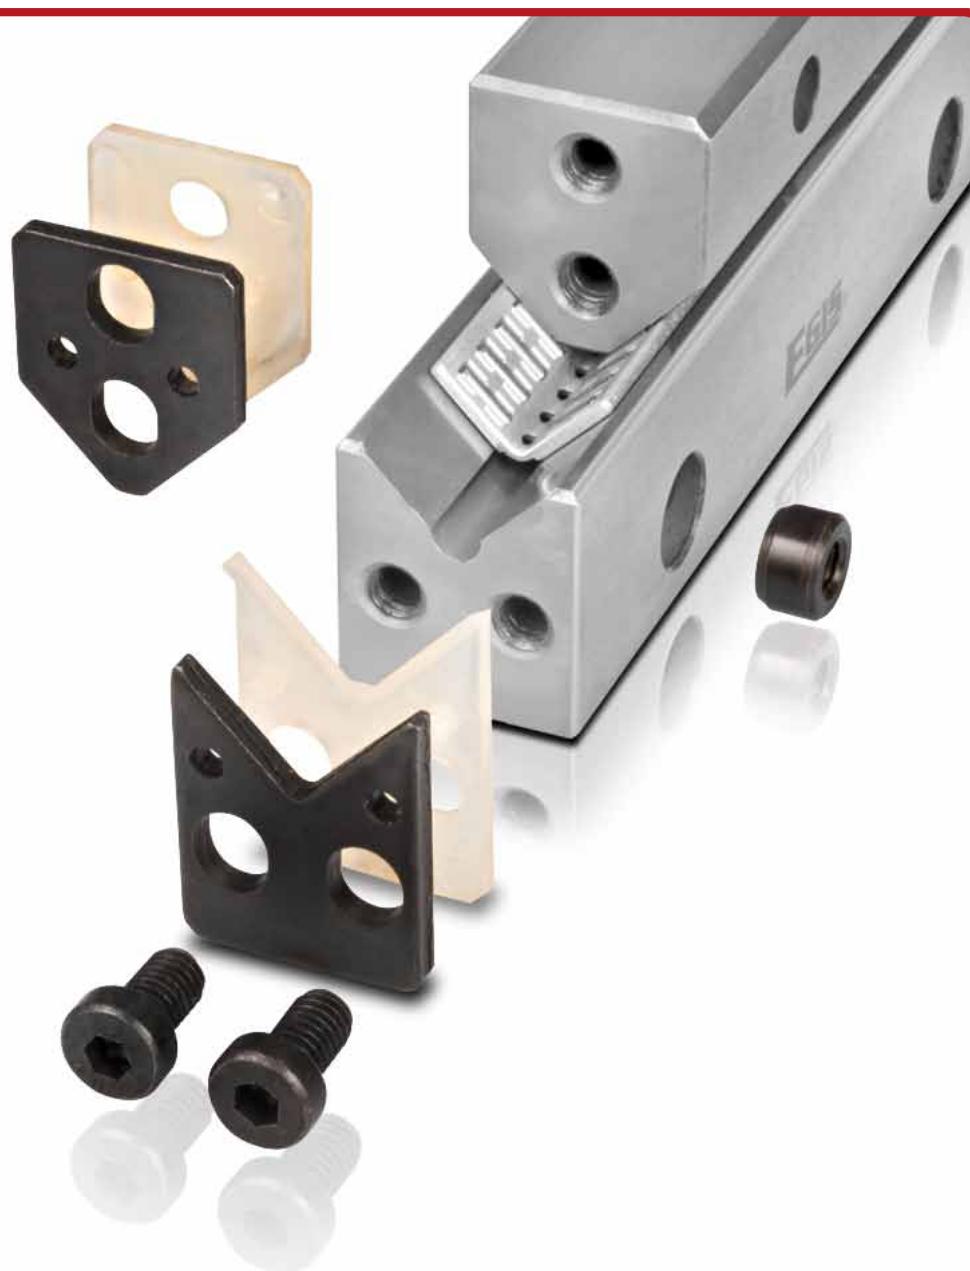

SPECIAL DESIGNS

Guideways for cross roller and ball flat cage assemblies
Guideways for hydrostatic guidance systems
Guideways for air bearings
Guideways with specific shapes and dimensions
Linear recirculating roller bearings (RUSW and U-100)

2

M AND V GUIDeways WITH NEEDLE OR CYLINDRI- CAL ROLLER FLAT CAGE AS- SEMBLY

A MATERIAL

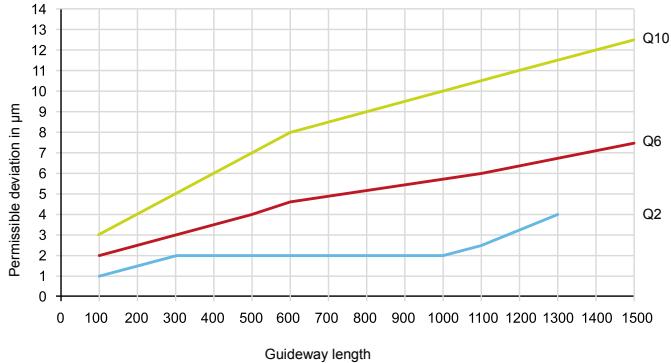

Hardened tool steel 1.2842 HRc 58 – 62.

B QUALITY

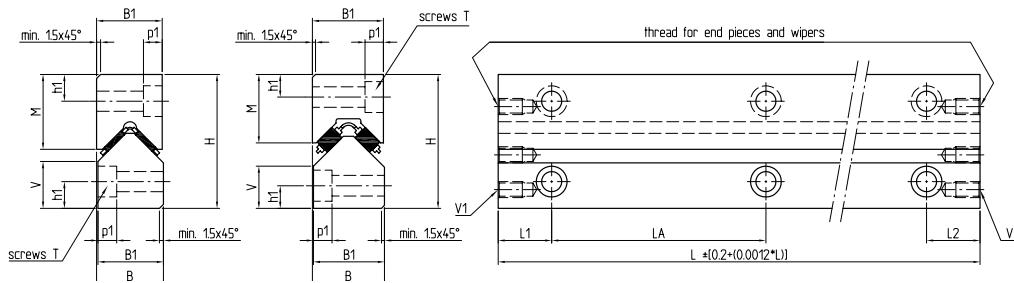

Raceways and locating faces are precision ground.

The guideways are available in 3 qualities (parallelism tolerance of the raceways on the reference sides of the guideway in relation to a defined length).

Q10: normal quality for general machine construction
Q6: precise quality for machine tool construction
Q2: particularly precise quality for exceptionally demanding structures

4

GUIDeways WITH INTEGRATED TOOTHED RACK MVZ (M/V/ML) FOR POSITIVE CONTROL OF THE NEEDLE ROLLER FLAT CAGE ASSEMBLY

A MATERIAL

Hardened tool steel 1.2842 HRc 58 – 62.

B QUALITY

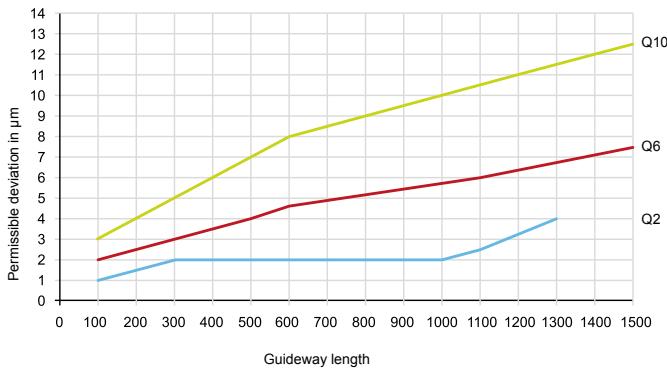

Raceways and locating faces are precision ground.

The guideways are available in 3 qualities (parallelism tolerance of the raceways on the reference sides of the guideway in relation to a defined length).

Q10: normal quality for general machine construction

Q6: precise quality for machine tool construction

Q2: particularly precise quality for exceptionally demanding structures

SPECIAL EXECUTIONS
SEE CHAPTER 10 ALTERNATIVE VERSIONS

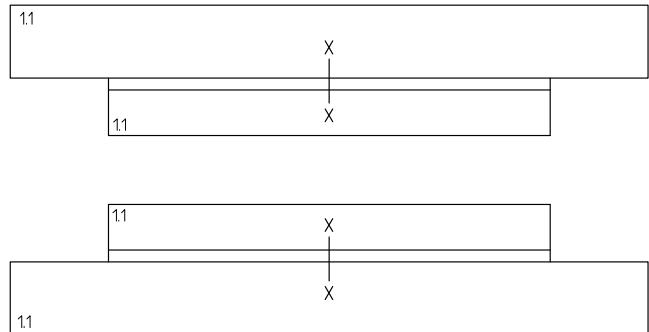

C MATCHING BY SETS

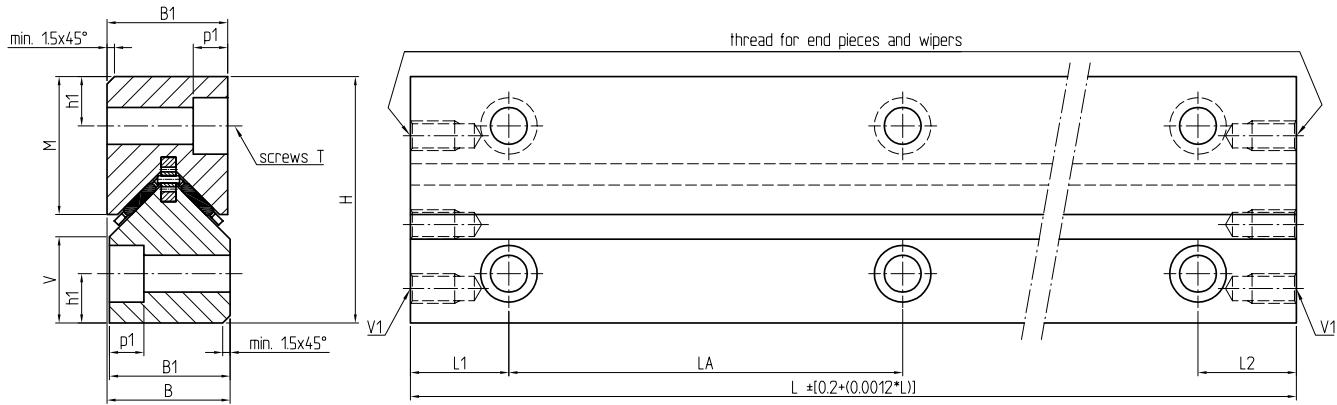

MVZ – guideways with integrated toothed rack are supplied in sets and consist of:

- M and/or ML guideways with integrated toothed rack.
- V guideways with integrated toothed rack.
- Flat cage assemblies: E-HW F or E-HW with integrated toothed wheel for positive control of the cage assemblies.
- The assembly dimensions have the same mounting dimensions as the M/ML and V guideways with flat cage assemblies.

IMPORTANT ASSEMBLY INFORMATION

- Set numbering must be respected.
- When the guideways are being positioned, it is important to take into account the “X-X” labelling which guarantees the correct positioning of the guideways and cage assemblies in the central stroke position.

M AND ML GUIDEWAYS WITH SLIDING LAYER (TURCITE OR PERMAGLIDE)

A MATERIAL

M and ML guideways: non-hardened tool steel 1.2842 with affixed Turcite (LB) or Permaglide (LP21)- sliding layer.

C CHOICE OF COATING

Reference values	Layer	
	Turcite LB	Permaglide LP21
Specific permissible load capacity Static p_{max} [N/mm ²]	6	250
$p * v_{max}$ [N/mm ² * m/s]	1	3
Permissible temperature [°C]	-40° bis +80°	-40° bis +110°
Friction coefficient (without lubricant)	0.15 – 0.26	Not usable
Friction coefficient (with lubricant)	0.04 – 0.08	0.02 – 0.2

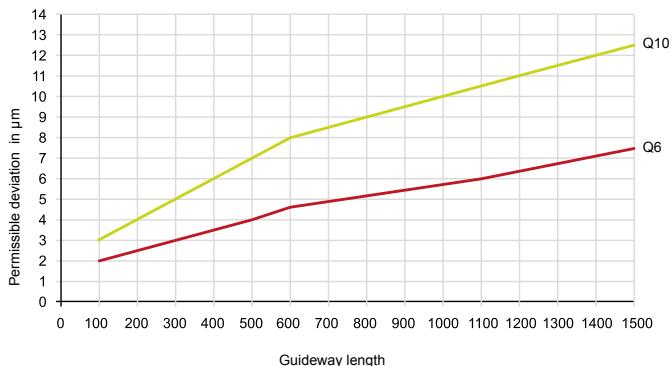

IMPORTANT INFORMATION

The use of M and ML guideway sets with a sliding layer and V guideways (without clearance or preloaded) in a rigid environment can result in uncontrolled friction in the presence of thermal expansion.

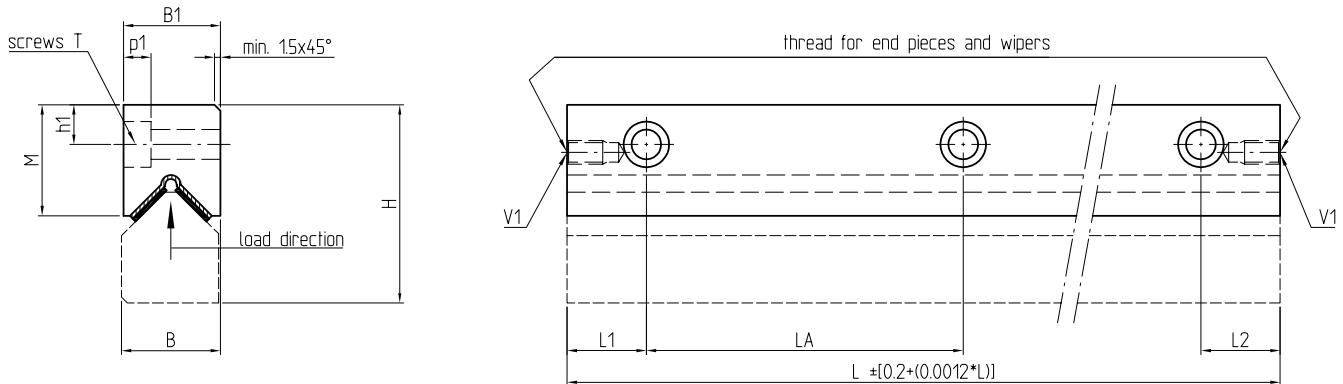

B QUALITY

The guideways with a sliding layer are available in 2 qualities (parallelism tolerance of the raceways on the reference sides of the guideways in relation to a defined length).

Q10: normal quality for general machine construction
Q6: precise quality for machine tool construction

6

S AND J GUIDeways WITH NEEDLE ROLLER FLAT CAGE ASSEMBLY

A MATERIAL

Hardened tool steel 1.2842 HRc 58 – 62.

B QUALITY

The raceways and locating faces are precision ground.

The guideways are available in 3 qualities
(parallelism tolerance of the raceways on the reference
sides of the guideway in relation to a defined length).

Q10: normal quality for general machine construction

Q6: precise quality for machine tool construction

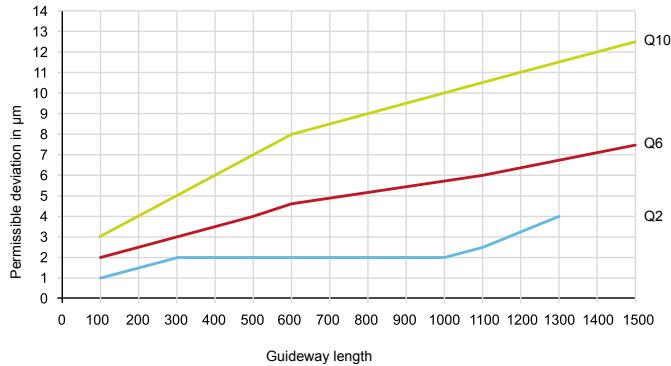

Q2: particularly precise quality for exceptionally demanding structures

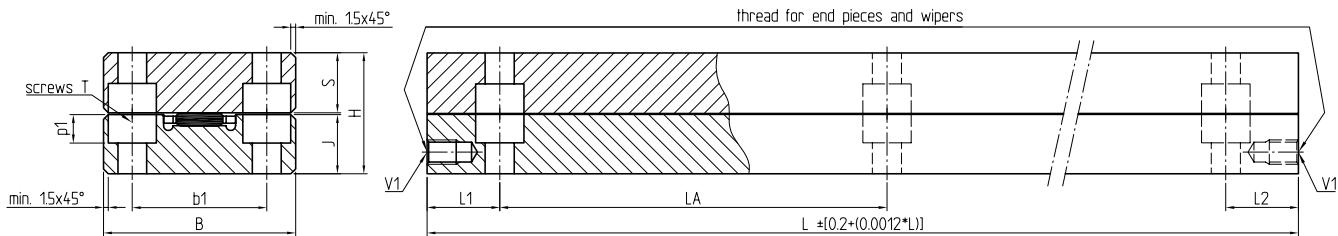

IMPORTANT INFORMATION

The correct functioning of the guideways is dependent
above all on the precision of the locating faces.

MATCHING IN SETS

Matching in sets "M/V/S/J" (4SX) when an order is placed allows for installation without insert plate or ML guideway. The guideways are labelled by sets. The tolerance of the height difference must be maintained with the connecting parts in this case.

LUE – COUNTERSTAY SYSTEM WITH NEEDLE AND CYLINDRICAL ROLLER FLAT CAGE ASSEMBLIES

The LUE counterstay system is particularly suited to high-precision applications. This system provides the highest level of accuracy of all linear guidance systems with rolling elements.

It is the perfect solution when a high degree of accuracy and rigidity are required, particularly when the main load operates in a vertical or lateral direction. The separation between locating and non-locating bearings prevents the system from becoming distorted by thermal expansion.

The LUE counterstay system does not require any adjustment after assembly.

The system is preloaded by components which have been adjusted against one another in terms of dimensions. Preloading is established by observing the prescribed tightening torques during assembly without any adjustments being required.

A MATERIAL

M and V and S and J guideways: Hardened tool steel 1.2842 HRc 58 – 62

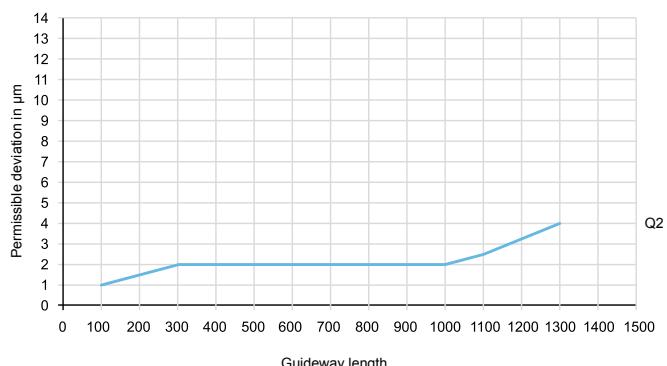

LU counterstays: counterstay bar (LUT) made from hardened tool steel 1.2842 HRc 58 – 62 and a distance bar (LUD) made from soft construction steel.

B QUALITY

The raceways and locating faces are precision ground.

The LUE counterstay system is only supplied in Q2 quality, which is the highest quality for standard guideways (parallelism tolerance of the raceways to the reference sides of the guideways in relation to a defined length).

Q2: particularly precise quality for exceptionally demanding structures

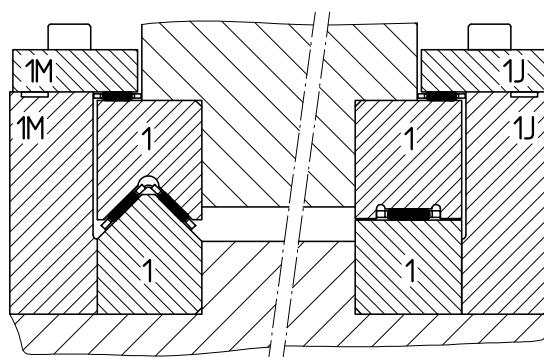

SPECIAL EXECUTIONS
SEE CHAPTER 10 ALTERNATIVE VERSIONS

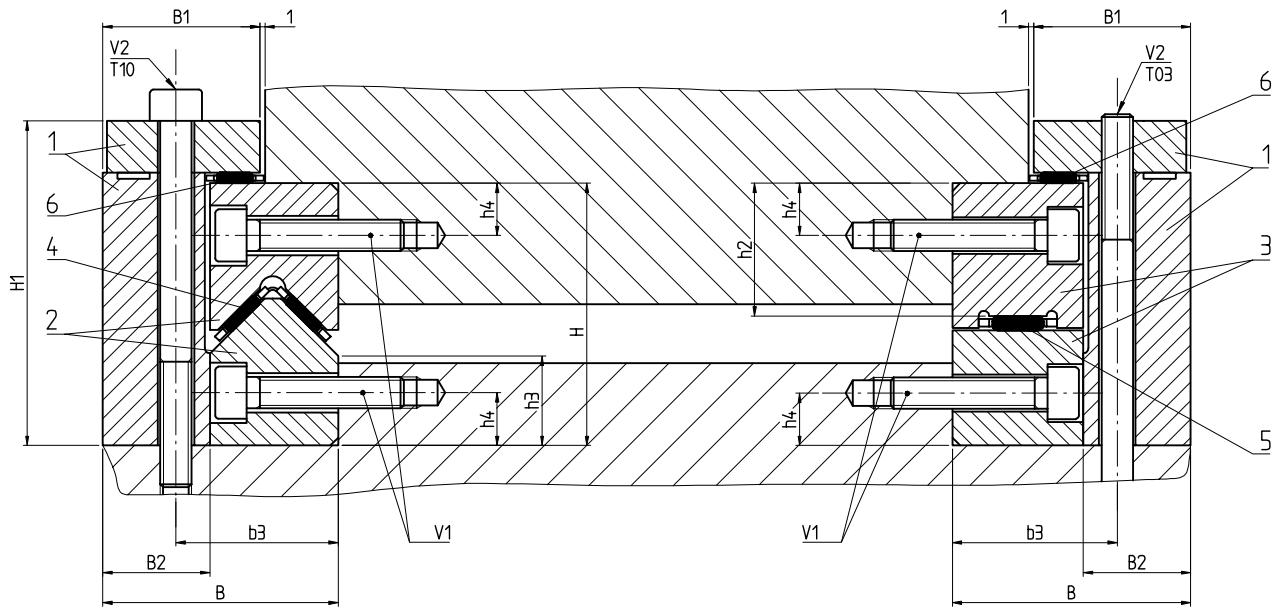

C MATCHING IN SETS

The guideways are manufactured, labelled and packaged by sets.

NB

Under no circumstances must the counterstay components be mixed up as matching and preloading could no longer be guaranteed in that case.

FLAT CAGE ASSEMBLIES

A GENERAL ASPECTS

Every cage type possesses specific technical characteristics and application features. The flat cage assemblies presented in the table below are intended for use with the guideways described in this catalogue. However, they can also run directly on raceways in connecting parts which fulfil the necessary characteristics.

The cage length can be adapted to the application in steps according to the spacing LA.

C MATERIAL

4 materials for flat basic cages:

- Aluminium (standard) for normal operating conditions and high accelerations
- Steel for difficult operating conditions (suffix "F")
- Plastic for easy operating conditions (series E-FF / E-FFW)
- Brass for special operating conditions (suffix "MS")
(Standard for cages with damping)

B RACEWAY CHARACTERISTICS

The raceways must fulfil the same conditions as the raceways on the guideways

- Surface roughness $R_a \leq 0.35 \mu\text{m}$
- Hardness min. 58 HRC / 670 HV

(with lower hardness levels, the hardness factors according to figure 10 page 25 should be taken into account)

D ALTERNATIVE VERSIONS

- Higher precision of rolling elements (suffix G1)
- Corrosion-resistant cages (suffix BK)
- Friction-reducing coating (suffix BR)

ACCESSORIES

END PIECES / WIPERS FOR
GUIDEWAYS / ESM INSERT
NUTS FOR GUIDEWAYS

END PIECES

Conditioning: end piece with fixing screws

- MATERIAL

Blackened construction steel St 37-2

Fixing screws ISO 7984

IMPORTANT INFORMATION: the end pieces must not be used to limit the stroke.

WIPERS

Conditioning: end piece with assembled wiper plate and fixing screws

- MATERIAL

Blackened construction steel St 37-2

Polyester elastomer

Fixing screws ISO 7984

Longitudinal seals may also be applied in order to reduce the risk of soiling on the raceways.

ESM INSERT NUTS

Standard guideways are delivered with sinkholes (T15). These guideways can be attached as with a threaded hole (T03) by using ESM insert nuts. The insert nuts must be glued into the hole (T13).

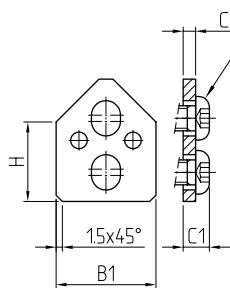

The ESM insert nuts should be ordered separately and are delivered loose.

- MATERIAL

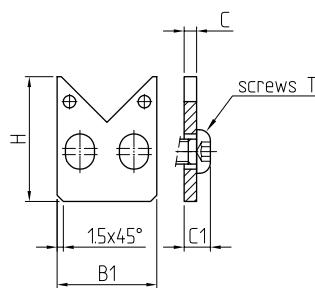

Heat-treatable steel CK 45 (1.1191)

ALTERNATIVE VERSIONS

GROUP	DETAILS	CODE
No threaded holes on front side	No threaded holes on both ends No threaded holes at beginning of the guideway (distance L1) No threaded holes at end of the guideway	E1 E1L E1R
Raceway lead areas at end of guideways	Raceway lead areas at both ends of the guideway Raceway lead area at beginning of the guideway (distance L1) Raceway lead area at end of the guideway (distance L2)	E2 E2L E2R
Position of fixing holes different from dimension table	Distance between the first hole and the start of the guideway Hole distance Distance between the last hole and the end of the guideway	L1 LA L2
Layout with longitudinal seal	 Layout sealed with sealing strips made from plastic Layout sealed with sealing strips made from a steel band	PP ZZ
Raceways with sliding layer	With Turcite sliding layer With Permaglide sliding layer	LB LP21
Layout with integrated toothed rack	For positive control of flat cage assemblies	MVZ

GROUP	DETAILS	CODE
Special treatments	Corrosion protection – thin layer chromium plating (layer thickness 2-5µm)	DSV
	Galvanising – nickel coating – blackening – sandblasting – trovalisation procedures, etc.	AVAILABLE ON REQUEST
Special tolerances	Pre-ground raceways Special height dimension (H) Restricted width tolerance Restricted hole distance tolerance (LA) Lubrication holes or additional holes Ground joints for multi-part guideways Guideways with joints ground on both sides	VQ10 TH TB P TG E5 E6
Different guideway materials	Stainless or other steel	AVAILABLE ON REQUEST
